Charter of Excellence

Chuditch strive to achieve a very high standard in all of our work scopes. You will always receive a professional standard; this is what puts Chuditch among the very best in business.

WHAT TO EXPECT	WHAT NOT TO EXPECT
Our team will be at the job and ready to start for the set time	The team arriving late resulting in delays
Full PPE worn at all times along with a productive attitude towards OHS	Missing items of PPE and lack of care
Up to date SWIMS/JSA for each job	Incorrect and out of date SWIMS/JSA
Designated Chuditch supervisor for your job, who is there ensuring the team are well organised and on target to completing within timeframes set out	No leadership with the team being disorganised
Project Manager overseeing the job ensuring the smooth overall running and addressing any issues that may arise	No management overseeing the job
Office Support for all team members / clients	No support or unanswered calls
Materials on site one day prior to start date	Carpenters stood around doing nothing waiting on materials
Timeframes clearly set out and understood by both Chuditch and you as the client	Excuses of why timeframes aren't met
Our Team are all qualified and attend regular training courses as required	Cowboys servicing your job
Professional team, who are well groomed and represent Chuditch in our branded uniforms	Carpenters turning up in ripped, dirty clothes with a distinct lack of self-grooming
We try our best to think of the environmental effect of works at all times, in order to reduce these and sustain a better environment.	Careless workers not thinking about the effect actions have on the environment
We are realistic within our timeframes and capabilities	Unrealistic timeframes and taking on work outside of our capabilities
We provide accurate and consistent information to our clients	Misleading information
We strongly believing that face to face communication builds a strong working relationship with our clients	Not putting a face to a name, just being a signature at the bottom of an email
Quality products used at all times from reputable suppliers	Cheap materials which will wear and tear quickly
We know our timber: we determine the site's climate and to allow the timber to adjust and acclimatize prior to installation.	Timber to be delivered and installation proceed immediately which will result in excessive post installation timber movement in most cases.
Clean and well organised work areas: we clean up after ourselves and ensure the area hasn't got power tool cords laying around which reduces risk of trip hazard	Waste everywhere which in turn creates potential hazards
Tenacity: we have a great work ethic and willingness to do what needs to be done	Workers with no work ethic or urgency
Attentiveness: we listen to our clients' needs and act on them	Not taking into consideration clients requirements/expectations
Quality control: we carefully assess our works to ensure they are completed to the highest of standards before signing off as complete	Unchecked work handed back as complete when it isn't

TRUSTED. ON TIME. ON BUDGET
